

POLLINATOR SUPPORT

Perennial Plants

Monarda fistulosa (USFWS Mountain-Prairie, Public domain, via Wikimedia Commons)

You can enhance biodiversity and help build resilience into our local ecosystems and regional landscape by selecting plants that support wildlife, including native pollinators and other insects. New England (NE) native and Local Ecotype (LE) plants are a great place to start.

Providing a long range of bloom times can support pollinators throughout their lifecycle, so diversity is key!

See reverse side for Cedar Circle plant list.
